https://github.com/AlexRoopesh/Clean-Data.git

Steps for Git

1. Create a repository in Github with the "<name>"

2. Open Git bash

3. git clone https://github.com/AlexRoopesh/<name>.git ## add .git to the folder name

4. cd <name> folder ## remember the folder name is <name> without the .git extension

3. copy files from R Studio console into the cloned repository

4. add files using git add . (new files), -u (updates/deletes), -A (does first two)

5. Only after 4 is done commit : git commit -m "comments" . ## This updates only the local repo

6. git push (to push the updates to Git hub)
